

Step 1: Take your skull and use the knife to cut out a section of your skull that is big enough for you to shove chunks of floral foam in but not too big to where your skulls integrity is compromised or hes more glass that skull.

Step 2: Stuff your skull with Floral foam. You want to really pack it in there. If you back closer to the surface of the skull the glass shards will look more like they are coming out of it where if you pack a little bit in further it will look like you cut into it.

Step 3: Use hot glue and cover the whole with crushed glass

Step 4: Optional: Paint the skull and add a border around the glass section
